Protecting Canvas and Fine Art

Extend the life and protect your fine art and canvas reproductions and giclee limited editions with Landor Liquid Lamination. Easy to apply yourself, you can now test youself with our liquid lamination starter kit which has everything you need to start protecting them.

Digital Wallpaper

Landor Wallpaper Liquid Laminate coatings have been formulated and developed specifically for the protection of digitally printed wallcoverings, including fabrics and our own & unique no residue removable and repositionable Phototex peel and stick Self adhesive fabric.

Recommended and used by most installers and manufacturers, backed by our 20 year expertise and Technical support.Wallpapers are protected once hung from the risks and effects of water, chemical,

abrasion and UV fade.

The addes layer of Protection that our coatings offer prevents chemical spillage or mishaps the effects of pollution, UV light fade, and abrasion sustaining its original quality and impact for extended life, enjoyment and display.

Whilst we reccomend our wallpaper matt version we can also offer gloss and satin/ semi gloss versions.

Graphics in High Traffic Areas

Every public building, retail outlet, events, venues, public transportation, offices, promotions or decorations can and will experiences alot of heavy people traffic, risks of abrasion, and damage every day.

With these unpredictable events and placement or positioning comes a great deal of exposure to pollution, dust, dirt and abrasion.

From a handbag to a briefcase, the occasional scuff, moisture, cleaning of such items will degrade your prints if they do not have a layer of protection

Landor coatings will not only prevent the premature damage and potential replacement but will also ensure the long term success of anything from interior decoration to branding, promotion or advertising through visual communications

Generally speaking Gloss is the best for preventing abrasion, whereas matt and satin can eliminate glare issues from intensive spotlights.

Fleet & Vehicle Graphics

default watermark

The Landor Vehicle & Transit grade Gloss liquid Laminate coatings are designed specifically to protect vehicle wraps and vehicle livery graphics in more challenging and aggressive environments from the damaging effects of everyday use and mobility, including abrasion, chemical exposure, and water exposure.

These coatings are highly elastic, allowing their protected images to flex, bend and adapt continuously with the vehicleâ??s surface, and contour as well as providing added protection against premature fading of the printed digital inks due to UV exposure or the harsh environment.

Our vehicle grade coatings work equally well for Truck tarpaulins and truck curtains and we have an established success for over 20 years

It is reccomended to work exclusively with gloss finish when working with vehicle applications.

Outdoor Signs, Branding and Promotions

Corporate signage is the brand owners image as well as advertising or branding communique. The outdoor climate, combining water, pollution, nature, sun and humidity all contribute to the premature degradation of digital prints. With Landor coatings you can expect to at least double the protection of your outdoor prints.

Child Play & Inflatables/Leisure Products

Bouncy Castles and Child play areas all use digital print now to enhance the offering within the leisure industry. Common limitations of digital inks require some form of protection and layer to separate the inks and substrate from the effects of heavy use and handling. Our coatings continue to provide that essential protection against the effects of moisture, abrasion, folding and transportation.

Truck Sides and Truck Curtains

For over 20 years now we provide the truck market with the support and solutions to enhance vehicle livery with full colour truckside curtains or vehicle graphics. Our added chemical resistance and UV protected coating laminates are essential when using truck curtains, or truckside with digital print

Liquid Laminate â?? Roll with it

Protecting Graphics in All Environments

Landor Liquid Lamination is an exclusive range of high performance and durable state-of-the-art finishing products. They provide essential protection as a digital varnish, digital lacquer or liquid

laminate as well as a resilient digital coating.

It can also provide an even topcoat or primer that preserves prints indefinitely as well as increasing the image quality and vibrancy, adding abrasion resistance and providing added UV protection.

Extend the Life of Your Banner through Liquid Laminate Coating

By their very nature, banners are not designed to be particularly long lasting. There are better and more durable materials available if you want something that stay looking good for many years. However, that isnâ??t to say you donâ??t want your banner in place for a reasonable amount of time. But how do you keep it looking good for as long as you need it?

Once your banner is up, it becomes really hard to maintain. It is out there in the wind, rain, heat and sunlight and there is very little you can do other than to watch it slowly deteriorate until you have little choice but to replace it.

default watermark

Laminating it can certainly help with its durability, but a flexible banner is not the easiest material to protect with a traditional dry laminate film. However, using an easy to apply liquid laminate coating provides a host of benefits that will ensure your banners can stay looking as good as new for much, much longer.

A liquid laminate coating can either be applied manually using a simple roller, or you could use a specialist machine that would provide a more even finish to larger banners.

FAQs

What is the best way to clean liquid laminates on truck curtains?

The best practice does depend on the application, for example a canvas would be treated differently to a truck curtain side. For more delicate applications like canvas, photographic and other inkjet prints, we would recommend using a soft cloth or sponge dipped in a solution of warm water and mild detergent. It is best to avoid any chemicals with Alcohol or alcohol based. Cleaning products for babies give good results due to their mild nature.

Truck curtain sides should be frequently cleaned otherwise dirt will build up. There is a temptation to use abrasive scrubbing or solutions containing alcohol to remove the dirt which could compromise the Liquid Lamination coating and create a porous surface allowing dirt to build up easier afterwards.

Is there a Liquid Laminate I can use on my UV curable inks?

Our UV Coating Series can usually meet all the criteria for a perfect Liquid Laminate for UV ink prints (itâ??s not just for truck curtains!). But all inks and substrates are not alike, so it is necessary to test for compatibility, At Landor we make that easier for you as our experience is here to support and share with you so we recommend you check with us first. Most of our coatings work as a single apply application, However in some cases you may need to use one of our coatings that also can also be used a Digital Primer. For example â?? if you want an anti graffiti protection for UV printed work, you may need to apply one of our coatings as a â??pre-coatâ??/digital primer- prior to applying our anti graffiti coating. We are happy to work and test with you to get the best versatile, and reliable coating possible

I am about to use your ClearShield Type C in an HVLP Spray system. Do you have any recommendations on pressure setting and what ratio to mix the liquid laminate with water?
For HVLP guns the pressure we recommend is 30 PSI at the gun. The ideal tip size should be 1.3 mm but you can use up to 1.6 mm. If you wish to thin this coating you can thin up to a very maximum of 10% but we reccomend you test first in increments of 2-3% at a time. Note:- The more you thin down the lesser the gloss level and quality of protection from our Original formulation which is specially set to be as universal and the best in user experience as well as protection
I normally use film laminates but I have a really big job, is there a size restriction with Liquid Lamination?
The only size restriction you will have is with a Liquid Lamination Machine. We provide as standard 1.6m, and 3.3m Liquid laminators but 5m Liquid Laminators may be produced to special order. For Superwide banners you can hand coat for as large as you can either layout on the floor or hang from a wall. As hand operation is possible with Hand rollers, Paint Pads, brush and Spray.
