Child Play & Inflatables/Leisure Products

Landor range of **liquid lamination** protective **coatings** for the leisure industry follows many years experience working with many different organizations to provide the necessary protection for their products in harsh environments, especially bouncy castles, indoors and outdoors, as well as Soft play materials.

Constant Handling, outdoor exposure and harsh environments puts the durable condition and quality of these material at high risk. Constant and Heavy use, moisture and abrasion will increase the risks and

cause the premature degradation of digitally printed bouncy castle inflatables, soft play materials. .

Advancements in ink technologies., improved ink durability has helped and contributed to the improved visuals and graphics used in todays leisure markets but the longevity can only be long lasting with the adequate protection of digitally printed inflatables and soft play materials with flexible coatings. this requires printed images to be coated with a dependable and durable water and abrasion resistant coating .

Landor Coatings are both flexible and durable with excellent washability and moisture protection. Liquid lamination is essential for the enjoyment and expected long lasting use of digitally printed graphics used for Bouncy castles and soft play equipment.

Landor has a proven range of coatings availabel next day for your next soft play or inflatable products or projects. We can assist you with the right services for coating in house or using one of our own coating partners.

We can assist you with most coating projects and will be happy to test your printed materials.
