Canvas and Fine Art â?? GiclÃ©e Varnish Coatings

Description

Protecting Canvas and Fine Art

Fine art or Wall art â?? as well as Photographic Displays in Galleries or for Exhibitions, or in the home, â?? our Range of **Giclee coatings** are developed for added protection as well as enhancement of the digitally printed artwork. Whether it is just for **archival** and extended life in its final home or many homes over its lifetime or if you want to protect the **fine art print** from **cracking** when it is **stretched on a frame**. you will have the **value and benefit** of a piece of art that will preserve and that you can enjoy over time.

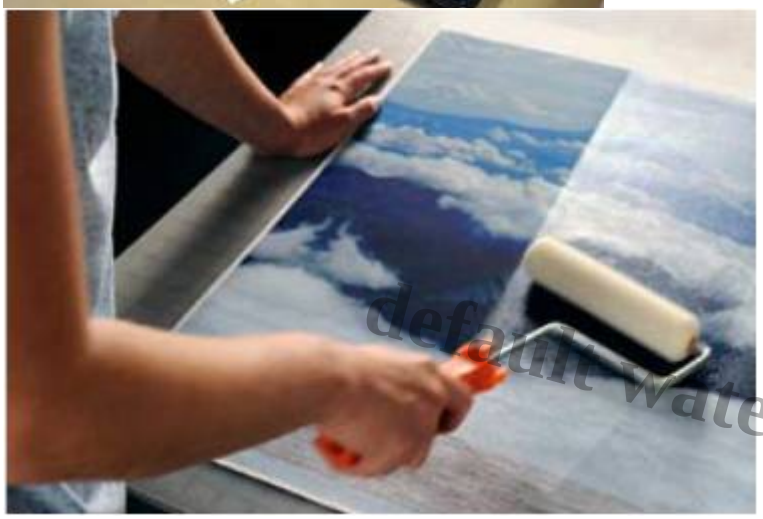

Canvas printing is a very popular and rewarding way to display, and reproduce works of **Fine Art & Photographic works,** as well as personal captured moments with your family or any other image that is special to you or a loved one. Canvas printed at **home** or in a **commercial operations** will benefit from a top quality Liquid Laminate (also referred as giclee varnish, and digital varnish) that will enhance as well as extend its life.

Our **Canvas protective coatings** first and foremost, protect canvas from the effects of moisture, pollution, water, and UV fade, which would otherwise degrade and affect the longevity of a canvas Print. Another very important feature of our coatings is to prevent the cracking of the ink on the textured weave of canvas when stretched onto a frame.

Protecting your valued print on canvas is therefore essential.with the Landor Canvas Protective coatings, available in Gloss, satin and Matt. The Landor Canvas Liquid Laminates are designed to penetrate fully, every portion of the canvas weaves, and textures and coats to protect the inks and the canvas evenly. Protecting the Canvas from yellowing is as important as protecting the ink from fading, and enables the build up of dirt, grime, or dust also to be wiped away without any degradation or effect to the Print (ink) and the canvas itself. Nothing quite protects as well your latest fine art or photographic print than a clear coating of our canvas fine art coatings. you can choose from a gloss, satin and a matt finish.

Choose Landor Canvas Coatings â?? hand roller is the right solution for you. However you can if desired also use a brush or spray equipment. Otherwise for a quick, easy ClearJet Fine Art (FA) Aerosol is also available in a â??ready to useâ?? no clean up spray can.

Landor Canvas coatings can be applied with a high density foam roller, Brush, spray gun or for larger jobs the Landor Canvas Coater liquid laminator.

Protecting your cherished prints and increasing the life of your canvas prints from the effects that can reduce their life span is really quite easy and very rewarding.

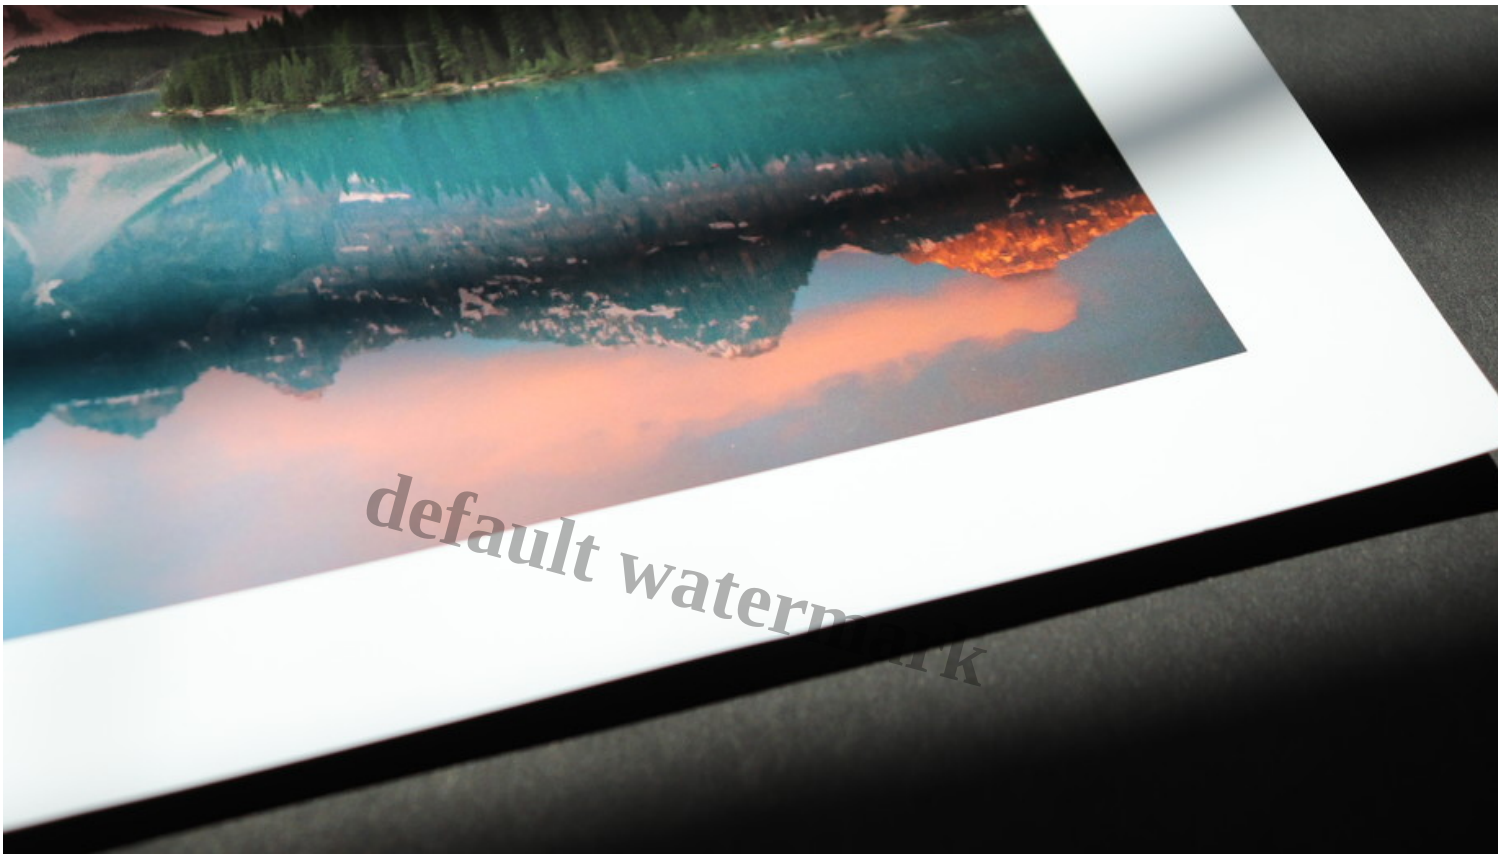

Landor Canvas coatings provides added flexibility as well as protection when stretching canvas with the guarantee and assurance that the Canvas will not Crack when Stretched on a frame.

Landor Canvas Coatings are all formulated, tested and guaranteed to work on micro porous and porous ink jet receptive layers.

Landor Canvas coatings reduce or eliminates pinholes normally encountered when applying Liquid Laminates to water resistant ink jet coated canvas.

Landor Canvas Coatings are formulated for water resistant canvas only and is best used with pigmented inks and water resistant canvas. (If you are using either water sensitive, non water sensitive canvas, or similarly dye based inks you must use our clearjet AFA coatings. Landor Canvas Coatings are available in Gloss, Satin, or matt.

Landor ClearJet Fine Art (FA) and Colourjet Canvas is our solvent coating range which is available either as a roll on, brush, or spray version. It is mostly available and easier to use as a ready to use spray aerosol, and especially easy for using at home, or for smaller jobs and which involves a lot less handling and less mess than with hand rollers (no clean up). Clearjet Fine Art FA is available in Gloss, Semi-gloss and Low-gloss (Low-Gloss =Matt).Colourjet is available in Gloss, Satin and matt finishes

Landor Clearshield or Colourshield coatings are suitable for water resistant substrates using water resistant inks such as pigmented aqueous inks (Epson, Canon, HP) or eco solvent, (ie: Roland-Mimaki) latex (HP) and uv inks (Roland, Mimaki, Agfa, Inktec etc)

Landor water based and solvent based canvas liquid laminate coatings have been specially developed to prevent canvas from cracking, so it is is as flexible as your substrate when stretched over a Lframe.
