ClearJet AFA Fixative Spray

Description

ClearJet AFA by Landor UK is a premium-quality inkjet print spray developed specially for the fine art, photographic and professional markets. It protects your image with an easy-to-use, flexible spray-on laminate and is compatible with most inkjet-printable media. ClearJet AFA is guaranteed to extend the life of your prints and resist all the elements that would otherwise limit their life without this protective coating.

Because of certain limitations of desktop inkjet dye and, especially, pigmented inks, exposure to water, abrasion and UV light would usually shorten the life of your inkjet prints. Once coated with ClearJet, your prints can even be washed. Landor ClearJet liquid laminate inkjet spray is compatible with most substrates, especially canvas and fine art papers, as it has been specially developed for these products. Landor ClearJet AFA is optimised for standard (water-based) inks and specially formulated for canvas and fine art inkjet prints. You can enhance your prints further with a choice of gloss, semi-gloss or low-gloss finishes.
