Landor Protective Coatings enhance David Anthony Hallâ??s amazing outdoor display at the Chelsea Flower Show.

Landor UK is getting a strong reputation for engaging with leading designers and photographers introducing them to new and challenging graphic applications which enhance their work.

Landor has worked several times in collaboration with photographer David Anthony Hall who has delivered phenomenal interior and exterior work. David uses the medium of photography and large format print to capture his expansive nature shots, this is undoubtedly an unusual path to follow.

Landor UKâ??s support
and expertise has been invaluable and it is an absolute delight to work with such an innovative supplier of unique creative products.

Itâ??s not as if one element on its own isnâ??t suffi cient to captivate an audience! Yet combined they blend perfectly, fusing impressive photography, design and printing techniques seamlessly to provide breath taking panoramic expression.

One of Davidâ??s recent projects was to produce a dramatic and atmospheric outdoor installation at the Chelsea Flower Show. He created an inspiring 20 metre x 3 metre woodland scene which was situated outside in the elements. David insisted on using Landorâ??s protective coatings which helped

to enhance the appearance while ensuring that the graphics were protected against the some times inclement UK weather.

David commented â??Landor UKâ??s support and expertise has been invaluable and it is an absolute delight to work with such an innovative supplier of unique creative products and the use of the protective coating meant that my images looked even more realistic and I could be confi dent that they would stay robust in any weathers.â?•

Derric Landor added â??Itâ??s been a delight to assist David with his projects. His photography is mind-blowing and is perfectly complimented when produced on a grand scale.â?•
