Fleet and Vehicle Graphics

Description

Fleet and Vehicle Graphics

The Landor Transit grade Gloss liquid Laminate coatings are designed specifically to protect vehicle wraps and vehicle livery graphics from the damaging effects of everyday use and mobility, including abrasion, chemical exposure, and water exposure. These coatings are highly elastic, allowing them to flex, bend and adapt continuously with the vehicleâ??s surface, as well as providing added protection against premature fading of the printed digital inks due to UV exposure.

In addition to providing long-term protection against environmental factors, Landor Transit Coatings are also designed to be easy to clean. The specially formulated gloss and water resistance characteristics of these coatings prevent dirt and water from sticking to the surface of the wrap, making it easier to clean and maintain the quality of the liquid lamination protection.

Default watermark

Based on historical use, Landor Transit Coated prints are known to last up to twice as long as unprotected prints in the same conditions. This means that vehicle wraps protected with Landor Transit Coatings can withstand the rigors of everyday use and maintain their appearance and performance over a longer period of time.

Overall, the Landor Transit grade Gloss liquid Laminate coatings are an essential tool for protecting vehicle wraps and vehicle livery graphics, ensuring that they remain in top condition and looking great for years to come.

Landor Transit Coatings are available in **gloss**, , **satin** and **matte** finishes.

- **State of the art UV inhibitors**
- **Protects from abrasion and marking**
- **Excellent chemical resistance**
- **Highly flexible**
