- Four major benefits of liquid lamination
- Choosing between ClearShield and ClearJet
- Hints and tips for using ClearShield, ClearJet, aerosols and complementary products
- Quick-look usage guide
- Disclaimer
- And more

Landor liquid laminates and laminators are used at home and in production environments to enhance images and protect highly valued prints. Liquid lamination is an alternative to film lamination and can be the only solution for applications such as fleet graphics, canvas, hung digital wallpaper and much more. Unlike film lamination, liquid laminates have no width restriction, making them the most flexible laminating method, and they give a high-quality finish with a hand roller or an automated machine. They are used everywhere from canvas at home to commercial fleet graphics and everything in between (plus applications we havenâ??t discovered yet). We keep finding new uses for liquid lamination through continual feedback from our customers in the UK and across Europe, whose innovative, forward-thinking approach to new applications keeps them one step ahead of their competitors.

If you are a current customer, are thinking about using liquid laminates or want to know more about liquid lamination machines, simply fill in your details for FREE access to the Landor Liquid Lamination Club.

Warmest regards,

Derric Landor

P.S. We are very interested in your feedback. Please let us know what information would be useful and interesting to you, to keep the Liquid Lamination Club fresh.
