

Landor ColourShield Anti-Microbial Coatings

Description

default watermark

After many years work, analysis, testing and customer support we are pleased to offer to our inkjet customers our own anti microbial coating. this coating meets the criteria set by ISO 22196 for the conditions of protecting agains bacteria, which in this certification and test is using e-coli and MRSA.

We can now offer in gloss, satin and matt, our high performance protective anti-microbial coatings, which can also guarantee bacteria free surfaces for the life of the print or surface coated with our colourshield Anti microbial coatings full protection.

As well as by hand, or machine our coatings can also be hand applied, coated with spray equipment, and brush. User friendly, environmentally friendly and safe to use by hand Retrospective coating is also possible. All you need is a clean, dry surface and assuming good non porous surface we can protect your surfaces. Also available as a protective additive, is using our self adhesive fabric, Landor Phototex which you can put anywhere without the risk of damaging the surface. Please call us for more information and samples.

Since Covid19, amny companies and the public generally are much more concerned with their safety and good health. the long term effects of Covid19 will not be as longlasting as the risks and dangers associated with the effects of touch, and transmissal of bacterial, so it is even more important to consider public places, and how they need to protect its people. This can be staff in a building to passengers in a bus. We at Landor have been looking at this and providing this solution for many years for digial print.

default watermark

What makes our solution unique is that it is a coating and not a film or over laminate. so our solution also remains eco friendly, no plastic, and not changes to the surface.

Coating is an efficient system available after printing to protect prints from damage from the elements. Now , not least of all, do we offer added protection against abrasion, chemical, water and uv damage but now also anti microbial protection.

If you have spaces that have heavy traffic, then talk to us. we will be happy to test and sample solutions for a safer environment, and a more ecological one. !
