Neschen Accu-18XE

Description

Designed for professional photographic studios, the Neschen Accu-18XE provides fully automatic, high-speed, dry-to-dry protective coating for digital and photographic images from 5 x 7 to 18 x 24 inches. No special operator training is needed. Simply insert the image and, in seconds, it is evenly protected with a scratch-resistant, moisture-resistant and image-enhancing coating.

Control is a key feature, with variable production speeds from 5 to 20 feet per minute and reversible action. An innovative heat-assisted air-cushion dryer ensures high-speed drying for improved production flow. The usual finishing bottleneck caused by expensive, time-consuming lamination or spraying is eliminated. Maintenance is simplified by automatic liquid-stabilising technology, allowing five to six daysâ?? operation without a daily clean-up, and the self-contained cartridge design of the coating rack makes cleaning quick and easy.
