Starlam Liquid Laminator by Landor Liquid Lamination

Description

The Starlam 1.6m Liquid Laminator

Protects, enhances and extends the life of your digital inkjet prints

default watermark

Despite advances in inkjet inks, their durability and resistance all too often fall short of the quality and lifespan expected on most inkjet substrates. Although we would all like to cut out a process or two, the standards expected of a digital print cannot be met without some form of protection. Digital prints can still be easily damaged, especially in more aggressive environments â?? and in production and installation, there is nothing worse than a damaged print. Public areas, high-traffic venues, water, rain, dirt and pollution, indoors and out, can quickly degrade print quality. With the Landor Starlam liquid laminator, you can be certain of giving your prints the added life and protection needed to meet

expectations.
If you have a small project and cannot see a long-term need for a liquid laminator, please contact us: we may have a temporary solution that lets you rent, or try before you buy, the Landor Starlam liquid laminator. Small jobs can also be sent to our R&D department, where we can coat as little as 5â??10m for you. Tell us about the projects that need added protection and we will see how we can help. Call us on +44 1252 624411 or email info@liquid-lamination.co.uk.
